Azure

Agile Methodologies

Game Design Principles

RESTful APIs

Continuous

Integration/Continuous

Deployment (CI/CD)

Object-Oriented Programming

(OOP)

WHO I AM

Software Engineer with expertise in Creator Tools and automated multiplayer testing at Mojang Studios, leveraging AAA game design, frontend development, and automation to scale infrastructure and enhance player experiences.

WORK EXPERIENCE

SOFTWARE ENGINEER

Mojang Studios (Insight Global Contract)

March 2022 - Current

- Collaborated with the creative director, gameplay designers, and fellow engineers to create engaging, thematic live events in Minecraft.
- Developed gameplay systems for the Minecraft Legends 2023 promotional live event that over 3 million players enjoyed.
- Co-engineered Minecraft's first automated multiplayer performance testing framework, which improved player-per-server capacity 8x.
- Converted the Gatherings Management tool to React which enabled its integration with Minecraft Marketplace content pipelines.
- Transitioned to MCTools team (multi-platform content management tool), expanding marketplace content validators, building telemetry framework that supported custom event logging and analysis, and developing localization framework that supports 20+ languages.

QA AUTOMATION ENGINEER

DIGARC (Modern Campus)

March 2021 - March 2022

- Updated and maintained over 300 automated web tests, ensuring reliable frontend regression coverage.
- Led weekly team meetings to evaluate software functionality and performance metrics in preparation for production deployments using Agile methodologies.
- Developed detailed test plans and tracked progress using Jira for a team of 6 across development and QA, ensuring timely completion of features and bug fixes.

SOFTWARE DESIGN ENGINEER IN TEST

Andromeda Systems Incorporated

August 2019 - March 2021

- Used Selenium to automate a large suite of test cases for an inventory management application used by the U.S. Navy.
- Built Angular components for administrative tools to improve client operations.

QA AUTOMATION ENGINEER CO-OP

Lenel Systems International

January 2018 - August 2018

- Helped develop and design a cloud-based facilities security product, contributing Selenium frontend automated tests and UX improvements.
