EDUCATION

Bachelor of Science

Game Design and Development

Rochester Institute of

Technology

August 2015 - May 2019

SKILLS

LANGUAGES

TypeScript/JavaScript

C++

C#

Python

FRONTEND

React

Angular

Node.js

SYSTEMS & PLATFORM

Distributed Systems

Performance Testing

Forward Deployed Engineering

Developer Tooling

Observability

Live Service Infrastructure

CLOUD & INFRA

Azure

CI/CD

REST APIs

Postgres

WORK EXPERIENCE

SOFTWARE ENGINEER

Mojang Studios

March 2022 - Current

- Co-engineered Minecraft: Bedrock Edition's first automated multiplayer performance testing framework, validating player-per-server capacity from 10 to 80 players and reducing infrastructure for a 25k concurrent-player live event from ~2,500 to ~313 Azure VMs.
- Maintained and iterated on the performance testing infrastructure for 3.5+ years, providing stable regression coverage that lowered QA overhead and server hosting costs over time.
- Developed foundational gameplay and event systems, including arena battles and in-game cutscenes, for the Minecraft Legends 2023 promotional live event, reaching 3M+ players.
- Rebuilt Live Events Management internal tooling as a React web application, integrating it into the Auger website to enable distribution to third-party creators and streamline the live events deployment process.
- Transitioned to the MCTools platform team and modernized the TypeScript codebase to current standards; expanded content validators to reduce manual review workload for the Minecraft Vanilla team and external creators.
- Built a telemetry framework using Application Insights with custom event logging and real-time issue detection, and developed a localization framework enabling MCTools in 20+ languages.

QA AUTOMATION ENGINEER

DIGARC

March 2021 - March 2022

- Updated and maintained over 300 automated web tests, ensuring reliable frontend regression coverage.
- Led weekly team meetings to evaluate software functionality and performance metrics in preparation for production deployments using Agile methodologies.
- Developed detailed test plans and tracked progress using Jira for a team of 6 across development and QA, ensuring timely completion of features and bug fixes.

SOFTWARE DESIGN ENGINEER IN TEST

Andromeda Systems Incorporated

August 2019 - March 2021

- Used Selenium to automate a large suite of test cases for an inventory management application used by the U.S. Navy.
- Built Angular components for administrative tools to improve client operations.

QA AUTOMATION ENGINEER CO-OP

Lenel Systems International

January 2018 - August 2018

- Helped develop and design a cloud-based facilities security product, contributing Selenium frontend automated tests and UX improvements.
