SUMMARY

Software Engineer with experience building scalable live-event systems, developer tooling, client/server performance infrastructure, and modern web applications at Mojang Studios. Directly supported millions of players, large-scale live events, and creator ecosystems.

PROFESSIONAL EXPERIENCE

Software Engineer, Microsoft - Remote, USA

March 2022 - June 2026

- Co-engineered Minecraft: Bedrock Edition's first automated multiplayer performance testing framework, enabling player-per-server capacity increase from 10 to 80 players and reducing infrastructure for a 25k concurrent-player live event from ~2,500 to ~313 Azure VMs
- Developed foundational gameplay and event systems, including Minecraft's first official in-game cutscene system, for the Minecraft Legends 2023 promotional live event, reaching over 3M players
- Rebuilt Minecraft: Bedrock Edition live events management tooling as a React web application, integrating it into the Auger website content pipeline to enable distribution to third party creators and streamline the live events deployment process
- Built a telemetry framework for MCTools using Application Insights that supports custom event logging and real-time issue detection
- Developed a localization framework, enabling MCTools to be available in 20+languages and bringing it into compliance with the minecraft.net domain
- Modernized much of the MCTools TypeScript codebase and expanded content validation suites to reduce manual review workload for the Minecraft Vanilla team and external creators

Software Design Engineer in Test (SDET), DIGARC - Remote, USA

March 2021 - March 2022

- Developed detailed test plans and tracked quality initiatives using Jira for an Agile team of developers, testers, and a PM
- Created and maintained several hundred automated E2E tests, ensuring reliable frontend regression coverage
- Led weekly team meetings to evaluate performance and functionality metrics in preparation for production deployments

SDET, Andromeda Systems Inc. - Jacksonville, FL

August 2019 - March 2021

- Developed hundreds of automated tests using Selenium for an inventory management application used by the U.S. Navy for aircraft maintenance
- Built Angular components using TypeScript for administrative tools to improve client operations and workflows

QA Automation Engineer CO-OP - Rochester, NY

January 2018 - August 2018

- Developed and designed a cloud-based facilities security product, contributing Selenium frontend automated tests and UI/UX improvements

SKILLS

Languages: TypeScript/JavaScript, C++, C#, Python

Web Development: React, Angular, Node.js, REST APIs

Testing and Automation: Playwright, Selenium, React Testing Library, Jest

Cloud and Infra: Git, Azure, Jenkins, SQL, PostgreSQL, CI/CD

EDUCATION

Rochester Institute of Technology - BS in Game Design and Development

August 2015 - May 2019
