EDUCATION

Bachelor of Science
Game Design and Development
Rochester Institute of
Technology
August 2015 - May 2019

SKILLS

LANGUAGES

TypeScript/JavaScript
C++
C#
Python

WEB DEVELOPMENT

React
Angular
Node.js
REST APIs

CLOUD & INFRA

Git
Azure
Jenkins
CI/CD
SQL
PostgreSQL

TESTING & AUTOMATION

AI-Driven Development
Selenium
Playwright
React Testing Library
Jest

WORK EXPERIENCE

SOFTWARE ENGINEER

Microsoft - Remote, USA
March 2022 - June 2026

- Co-engineered Minecraft: Bedrock Edition's first automated multiplayer performance testing framework, enabling player-per-server capacity increase from 10 to 80 players and reducing infrastructure for a 25k concurrent-player live event from ~2,500 to ~313 Azure VMs
- Developed foundational gameplay and event systems, including Minecraft's first official in-game cutscene system, for the Minecraft Legends 2023 promotional live event, reaching over 3M players
- Rebuilt Minecraft: Bedrock Edition live events management tooling as a React web application, integrating it into the Auger website content pipeline to enable distribution to third party creators and streamline the live events deployment process
- Built a telemetry framework for MCTools using Application Insights that supports custom event logging and real-time issue detection
- Developed a localization framework, enabling MCTools to be available in 20+languages and bringing it into compliance with the minecraft.net domain
- Modernized much of the MCTools TypeScript codebase and expanded content validation suites to reduce manual review workload for the Minecraft Vanilla team and external creators

QA AUTOMATION ENGINEER

DIGARC - Remote, USA
March 2021 - March 2022

- Developed detailed test plans and tracked quality initiatives using Jira for an Agile team of developers, testers, and a PM
- Created and maintained several hundred automated E2E tests, ensuring reliable frontend regression coverage
- Led weekly team meetings to evaluate performance and functionality metrics in preparation for production deployments

SOFTWARE DESIGN ENGINEER IN TEST

Andromeda Systems Inc - Jacksonville, Florida
August 2019 - March 2021

- Developed hundreds of automated tests using Selenium for an inventory management application used by the U.S. Navy for aircraft maintenance
- Built Angular components using TypeScript for administrative tools to improve client operations and workflows

QA AUTOMATION ENGINEER CO-OP

Lenel Systems International - Rochester, New York
January 2018 - August 2018

- Developed and designed a cloud-based facilities security product, contributing Selenium frontend automated tests and UI/UX improvements
